

Airport Portal Solution Accelerator

NIIT Technologies' Airport Portal Solution Accelerator addresses the needs of the Airport Portals to work in the best and optimised way by ensuring that the information provided should stand out and be recognised in the surrounding data smog. The portal at its core, mediates between various ways, between the user and the vast range of information in hyperspace.

An Overview

Information age, digital age and wireless age are the terms that are used to represent the present era. Technological advances in Information Technology have changed lifestyles around the world.

Passengers, airlines and FBOs need various kinds of information from the airport and this information should be quickly and easily available or can be requested for. But a flood of information creates distortion in presentation. The IT Unit responsible for airports takes care of the quality and content of the information flow on the airport web portal.

Business Benefits

- **Diversify Revenue Streams:** The architecture serves as a medium to showcase the information the airport has, as well as generate revenues by selling a portion of portal web-space to their business associates
- **Reduced Time-to-Deliver:** The solution offers reusable components that reduce time to deliver, enabling shorter release cycles to meet the needs of rapidly evolving businesses
- **Quality of Service:** Our CMMi Level 5, ISO 9001:2000, ISO 27001 security standard and procedures ensure quality, consistency, predictability, continual improvement and reliability of services
- **Domain Expertise:** Use of standards and best practices ensuring functionally superior services
- **Interoperability and Integration:** Flexible and robust middleware that can be easily integrated with intranet, legacy systems databases and other business partners' portals/websites
- **Ease of Future Enhancements:** SOA based Open System Architecture that enables ease of future enhancements and integrates with backend systems
- **Lower Cost of Ownership:** Open system technologies and flexible business models assist in reducing total cost of ownership. In addition, the customer jointly owns the IPR and there are license fees

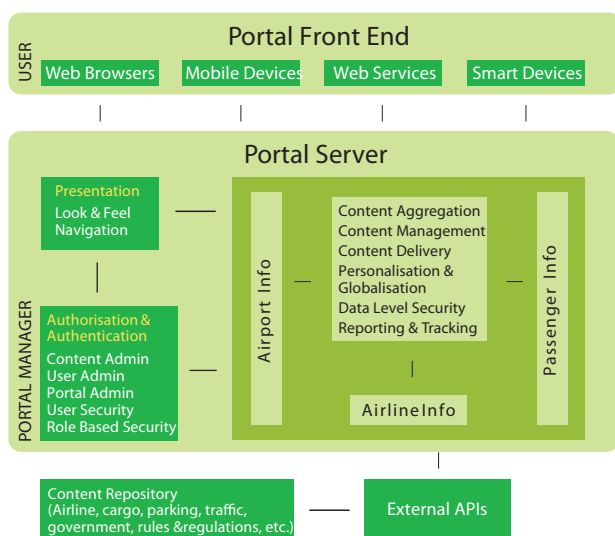

USP

Content Repository: Extensive collection of features categorised to airport business size and type based on our research on several airport websites and portals.

Core Features

- Multiple Browser Compatibility
- Multiple Channel Support
- Presentation Components
- Web Services
- Search and Advanced Search
- Authorisation and Authentication
 - User Admin.
 - Content Admin.
 - Portal Admin.
 - User Security
 - Role-based Security
- Data Level Security
- Content Integration
 - Content Aggregation
 - Content Management
 - Content Delivery
- Personalisation and Globalisation
- Tracking and Reporting

How the portal has been made secure?

- CAPTCHA (Completely Automated Public Turing test to tell Computers and Humans Apart)
- DMZ (De-militarised Zone)
- SSO (Single Sign-on)
- SSL encryption
- Log Maintenance

Add-ons

- Intelligent Caching
- Search Engine Optimisation
- Testing and Maintenance
- Managed Services (IT helpdesk, BPO, Hosting etc.)
- Feedback and Passenger Complaint Management
- Visit Count
- Multiple Language Support
- Registration and Subscription
