

## Case Study

### Testing Services to a Leading Hedge Fund Manager in UK

#### Client Profile

Client provides portfolio management services to various investors.

#### Business Challenge

- To develop automated testing tools to carry out performance benchmarking of the various application components being used for analysing and processing the portfolio data
- To develop testing tools to perform functional validation of data output

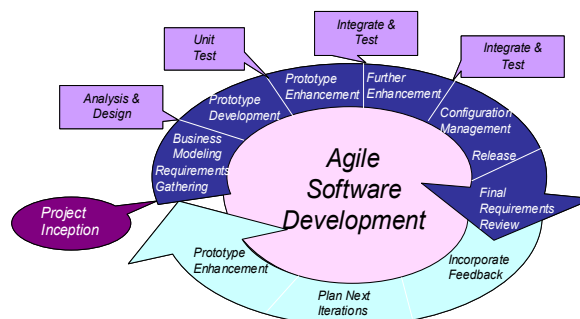

#### Business Solution

##### Implementation Challenge

- Client's first experience with dual shore model
- Complicated business functionality

##### Methodology

- Development using highly iterative Agile methodology

- Provision of functional and technical expertise to develop highly customised testing tools

#### Impact Achieved

- Rapidly developed an automated testing tool that matched the best in the Financial services market in features and functionality
- Streamlined the existing portfolio of applications to meet the industry benchmarks for performance, execution latency and memory usage
- Seamlessly integrated the testing tool with the client's existing Trade Optimised Portfolio System
- Provided ease of integration with any third party components developed on the "Streambase" platform
